Projects

• **TechnoHire**

This project managing various entities such as companies, employees, personal information, educational information, and employment information. The application has different user roles such as admin, employee, and company, each with specific access permissions.

Key Components:-

1. The application uses middleware to restrict access to certain routes based on user roles (admin, employee, company).
2. Routes are grouped under specific middleware for authentication (auth) and role-based access control.
3. AdminController: Manages administrative tasks, including adding and managing companies.
4. AddUserController: Handles adding, editing, viewing, and deleting employees.
5. PersonalInfoController: Manages personal information of users.
6. AcademyController: Handles educational information.
7. EmployeeInfoController: Manages employment information and employee-specific actions.
8. CompanyController: Manages company-related actions.
9. UserController: Handles general user-related actions.
10. Routes are only accessible to authenticated users with specific roles.

This project is a comprehensive web application for managing companies, employees, personal information, educational information, and employment information.

• **Ecommerce Website (For training at Fiducia)**

In this website, i have made an admin panel for managing logo of website, sliders, crud operations with product, defining category, different roles for the specific users like Admin, Vendor or Customer and many more things to ease the work of client and users.

• **Youthance (Job Portal)**

This is a part-time job portal on which anyone can apply for the job of his choice from the list of jobs. The job are posted to the app from the admin panel. And if any 3rd party company wants to hire candidates in bulk then they can submit a proposal on www.youthance.com, just by filling up a form, which will receive by the admin in admin panel as well as on mail. After verification the admin can post that job to the app from the admin panel. When user apply for any job then may be he have answer some mcq questions, these answer are related to the job description or the task available in the job. If user is gone through the whole job description as well as the task it includes, then he can easily answer to the mcq questions.

• **Online Medical Store**

This project includes multiple auth system for each user type i.e. Admin, Supplier, Client and Delivery Person. Basically this application is made for local medicine shop vendors, who can register on this application and need to submit some documents for verification by admin. And after successfully verifying by the admin, the supplier can sell their medicine online. Supplier have the functionality to register his delivery person and assign order to each delivery person. At point of delivery, the delivery person can update the order status and delivery date time, when the order is successfully delivered to the Client.
